

**NEW
OPTION**

Sun Fast 3200

Still leading the fleet!

■ NEW OPTION: A FULLY ADAPTABLE OPEN COCKPIT

Ever attentive to developing sailing needs and trends, JEANNEAU is expanding its offer with an optional open cockpit, a feature sure to appeal to the racing sailor.

Lighter and more open, the cockpit will have an ergonomic design that is particularly well suited to sailboat racing.

This option will soon be available aboard the Sun Fast 3200 and will also be offered in kit form to adapt existing Sun Fast 3200s.

THIS OPTION FEATURES SIX CHANGES:

- The **large life raft storage compartment** is replaced by a flush storage locker under the cockpit floor.
- The **life raft is on the exterior**, behind the traveller, and very easily accessible.
- The **mainsail track** is self-supporting and runs forward of the life raft.
- The **mainsheet** is moved aft near the track.
- The mainsheet fine tune and the backstay adjustment are located on the **raised foot rests**.
- The **backstay attachment** is on the centreline of the boat.

1 FOOT REST:

Added to the existing deck, the high foot rests cover those initially present on the cockpit floor. Their form and ergonomic design draw inspiration from the Sun Fast 3600.

ADVANTAGES:

- Better ergonomic design, better bracing position, access to sail adjustments.

2 STORAGE LOCKER:

A more compact storage locker, integrated into the cockpit floor, offers two distinct storage spaces.

ADVANTAGES:

- Weight savings, facilitates movement about the deck, better access to rudders.
- Can be installed aboard an existing Sun Fast 3200.

3 MAINSAIL TRACK:

The mainsail track is now self-supporting, with stainless steel tie rods attaching it to the cockpit floor.

ADVANTAGES:

- Light, simple, and the same excellent control of the trailing edge.

4 MAINSHEET:

Attached to the cockpit floor, the mainsheet is directed to a centreline flip-flop block between the helms. The fine tune follows the same path, and arrives at each foot rest.

ADVANTAGES:

- Ergonomic design, safety, simplicity.

5 LIFE RAFT:

The life raft comes out of the storage locker, and is found on the exterior, under the mainsheet traveller.

ADVANTAGES:

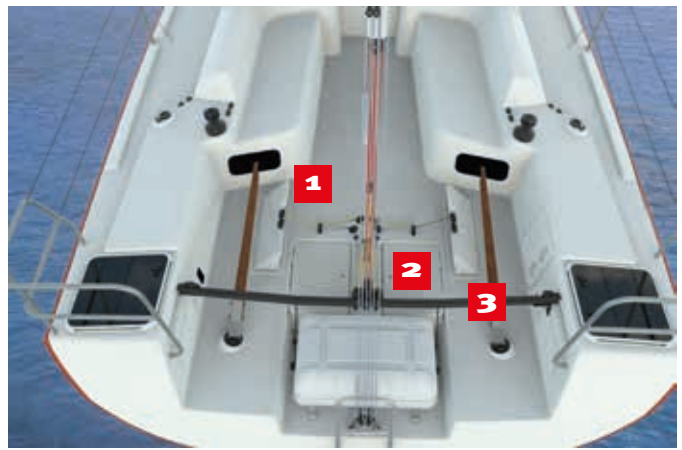

- Open and easy access to the life raft, located on the aft transom, more secure.
- 100% compatible with valise or canister-type life rafts.

6 BACKSTAY ADJUSTMENT:

Attached on a central chainplate, the adjustment lines pass under the life raft and then follow along the cockpit floor via the fibreglass storage locker. The lines arrive at each foot rest.

ADVANTAGES:

- Better ergonomic design, elimination of the backstay bridle, simplified, more direct layout and control.
